REAL RESULTS

Genesis: Zenon's GenAI Competition 2026

Kick-off: June 2026

Objectives of the competition

Create business value and institutionalize stronger engineering habits.

1

**Accelerate Agentic AI
capability development
within the firm**

2

**Surface real-world
solution ideas
applicable to our
clients and internal
operations**

3

**Develop an AI-first,
engineering focused
culture within Zenon**

Teams practice structured execution while producing assets that can be pitched and shipped

Teams can choose between three competition tracks

Teams choose a track, work in small squads, and progress through build cycles.

TRACK A:

Client Facing Solutions

Agentic AI workflows or GenAI tools that solve real client problems and can be shipped as client-ready solutions

TRACK B:

Internal Ops & Tooling

Internal productivity solutions across prospective client outreach, proposal generation, knowledge management, firm enablement, etc.

TRACK C:

Open Category

Exploratory ideas (e.g., evaluation frameworks, agentic optimization, or anything you want); subject to the Committee review and approval

Team Structure

- 2–3 members per team
- Cross-functional and cross-geographical teams encouraged

Timelines: 12 weeks

Structured delivery with sprint cycles and review checkpoints

Key checkpoints: Sprint demos in Week 6, Week 9, and final Demo Day in Week 12

* Denotes Genesis Committee comprising of Novnit, Riya, Priyesh, and Suyash Baderiya

The competition rewards not only ideas, but repeatable delivery quality

Required Deliverables

1. **1–2-page brief (Weeks 2-3):** problem statement, proposed solution, target user/client, and sprint plan
2. **Prototype (Weeks 4-10):** a functional prototype with code committed to **AWS CodeCommit with reproducible setup + Documentation for set-up and usage.**
3. **One-pagers (Week 10):** 1) Client-ready use case/impact; 2) internal accuracy/cost/latency summary; 3) Implementation Spec: path-to-production/client deployment
4. **Social Media Content:** 1) 1-min recorded video on the use case (Week 10); 2) 1–2 sentences on what they built or learned; 3) 3–5 sentences per team summarizing their use case; 4) behind the scenes photos of the teams

Engineering Operating Model

1. **Problem Framing:** Clear problem statement, target user, success metrics, owner, and **backlog in JIRA.**
2. **Build Discipline:** Code in AWS CodeCommit with **meaningful commits** and PRs; **Sprint tracking using JIRA**
3. **Evidence of readiness:** Teams show accuracy, cost, latency, eval approach, and path-to-production considerations
4. **Evidence of reproducibility:** Teams must confirm their tool set-up is reproducible on a fresh machine by following instructions in the README.md

1. All IP created during the competition belongs to Zenon
2. Use of external APIs (OpenAI, Anthropic, etc.) is permitted; Zenon will provide API keys with budget limits
3. Teams must not use confidential client data in demos — synthetic or anonymized data only (exposure to develop synthetic data – approach for this)
4. Submissions must be original work created during the competition window
5. Requirements:
 1. All teams must provide a team name that resonates with their competition use case
 2. All participants must submit individual portrait photos and a team group photo

Finals Day: Tentative Outline (To be finalized)

Full-day event in New Delhi, with the Zenon India team attending in person and the Zenon US team joining virtually during the morning ET window.

Start Time (IST)	End Time (IST)	Start Time (EST)	End Time (EST)	Session (New Delhi Event)
10:00 AM	12:30 PM			Morning Tea/Coffee/Snacks; Opening Note & Day Overview; Session / Activity 1 - TBD
12:30 PM	2:30 PM			Lunch
2:30 PM	5:30 PM			Session / Activity 2 – TBD; Break / Team Prep / Final Setup; Evening Tea/Coffee/Snacks
5:30 PM	9:00 PM	8:00 AM	11:30 AM	Final Demo Day Kickoff; Top 5 team presentations; Results
9:00 PM	onwards			Dinner

Judging Model: Human panel + AI judge

Comprehensive evaluation framework with AI-assisted assessment

Panel composition

- 3 human judges + 1 AI judge
- Internal leadership
- External judges
- **AI judge:** focus on Engineering quality

Scoring rubric:

Zenon impact (revenue potential/time savings)	25%
Technical depth & innovation	25%
Feasibility & production readiness	25%
Originality	15%
Presentation quality + Social Media materials	10%

The Genesis Committee (GC)

Core Team

Novnit Kashyap

Riya Gupta

Priyesh Kumar

Suyash Baderiya

Planning and Support

Bharti Sahai

Pooja Pandey

Abhishek Pradhan

Gennifer Niezgoda

Paula Ureta

Rohit Chhabra
